

FORTHCOMING IN 2009**Ecosystem Services and Global Trade of Natural Resources**

Ecology, Economics and Policies

Edited by **Thomas Köllner**, Swiss Federal Institute of Technology

The aim of this book is to show how the increase in international trade of biophysical commodities can damage global ecosystems and their services, how those damages can be accounted for in Life Cycle Assessment and Green National Accounting and how instruments in the public and private sector can help to achieve a more sustainable global trade. The focus is on the global ecosystem impact of traded products due to land use, freshwater use and use of marine environments.

FORTHCOMING IN 2009**Preference Data for Environmental Valuation**

Combining Revealed and Stated Approaches

Edited by **Tim Haab**, Ohio State University, USA, **Ju-Chin Huang**, University of New Hampshire, USA and **John Whitehead**, Appalachian State University, USA

The monetary valuation of environmental goods and services has evolved from a fringe field of study in the late 1970s and early 1980s to a primary focus of environmental economists over the past decade. Despite its rapid growth, practitioners of valuation techniques often find themselves defending their practices to both users of the results of applied studies and, perhaps more troubling, to other practitioners.

One of the more heated threads of this internal debate over valuation techniques revolves around the types of data to use in performing a valuation study. In the infant years of the development of valuation techniques, two schools of thought emerged: the revealed preference school and the stated preference school, the latter of which is perhaps most associated with the contingent valuation method.

In the midst of this heated debate an exciting new approach to non-market valuation was developed in the 1990s: a combination and joint estimation of revealed preference (RP) and stated preference (SP) data.

This book provides a systematic, cohesive and in-depth discussion of the theory and methods of joint estimation, as well as showcasing recent developments in theory and methods of data combination and joint estimation via a set of original, state-of-the-art studies that are contributed by leading researchers in the field.

FORTHCOMING IN 2009**New Perspectives on Agri-environmental Policies**

A Multidisciplinary and Transatlantic Approach

Edited by **Stephan J. Goetz**, Pennsylvania State University, USA and **Floor Brouwer**, LEI-DLO Agricultural Economics Research Institute, the Netherlands

Significant advances have occurred in recent years in Europe and in North America in addressing agri-environmental policies, but whilst important institutional and legal differences still exist between the two continents, the sharing of recent scientific advances will benefit scientists on both sides of the Atlantic. This is the main purpose of this book.

FORTHCOMING IN 2009**The Cooperation Challenge of Water Supply Economics**

A Study of the New York City Watershed Collaboration

Edited by **Joan Hoffman**, John Jay College of Criminal Justice, New York, USA

With a population of 18.7 million people, the New York City metropolitan area is a voracious consumer of water, and the importance of sustaining these supplies is of paramount importance.

The aim of the New York City watershed collaboration has been to work with both government and non-governmental partners to protect the city's water supply while promoting economic viability and preserving the social character of the communities located in the upstate areas from where the water is sourced.

In this book, Joan Hoffman examines the watershed collaboration from an economic perspective as well as the possibility of alternative means of water protection such as regulation. The case is examined in the light of similar collaborations elsewhere in the world.

FORTHCOMING IN 2009**Waste and Environmental Policy**

Edited by **Massimiliano Mazzanti**, University of Ferrara, Italy and **Anna Montini**, University of Bologna, Italy

This research deals with the increasingly complex issues of waste generation, waste management and waste disposal that in less developed industrialised countries present diverse but critical concerns.

February 2009: 234 x 156: 224pp
Hb: 978-0-415-45936-5: **\$150.00**

FORTHCOMING IN 2009**Benefits of Environmental Policy**

Edited by **Dirk Rübölke**, CICERO, Center for International Climate and Environmental Research, Oslo, Norway and **Klaus D. John**, Technical University of Chemnitz, Germany

This book addresses the wide range of co-effects associated with environmental policies and the ways they may increase or decrease the attractiveness of environmental policy as a whole. Therefore, the book's scope moves beyond standard economic analyses, which regularly postulate a clear cause-and-effect chain. The complexity and wide range of benefits is investigated from different perspectives and by means of different methodologies.

FORTHCOMING IN 2009**Climate Change and the Private Sector**

Managing Climate Risks and Financing Carbon Neutral Energy Infrastructure

Edited by **Craig Hart**, Massachusetts Institute of Technology, USA

This book contributes to new areas of research by examining the role of the private sector in addressing the challenges of climate change.

March 2009: 234 x 156: 288pp
Hb: 978-0-415-77475-8: **\$149.00**

FORTHCOMING IN 2009**Avoided Deforestation**

Prospects for Mitigating Climate Change

Edited by **Charles Palmer** and **Stefanie Engel**, both at Swiss Federal Institute of Technology

Up until now the debate in terms of the scientific and economic implications of avoided deforestation has not been brought together. This book gathers together important research findings in the area along with their policy implications, whilst linking avoided deforestation to political economy as well as to the latest developments in environmental and natural resource economics.
